1. EVENT SUMMARY

Organizing club	Synthetic Robotics Club (faculty advisor: Dr. A. Example, fictional)
Event	Synthetic Robotics Demo Day 2026, an open demo afternoon for student robotics teams
Date and time	Tuesday 24 November 2026, 15:00 to 17:00 IST (doors open at 14:45)
Venue	Synthetic Main Auditorium (capacity 450)
Expected attendance	200 students and 12 faculty guests
Submitted	2 November 2026, which is 22 days (over three weeks) before the event

Purpose

Eight student teams demonstrate a working robot for seven minutes each to an audience of peers and faculty, followed by a supervised indoor drone flight and an awards ceremony. The goal is to recruit first-year students into the club and to give teams practice presenting engineering work to a general audience.

2. VENUE, TIMING AND SUPPORT REQUESTED

Why this slot

The auditorium has no confirmed booking on 24 November 2026, and the event ends at least two hours before the next campus event, which respects the planning rule of 120 minutes between campus events. Venue and equipment requests were sent to Student Affairs more than two weeks ahead, as the handbook asks, but are not yet confirmed in writing. This proposal is a plan, not a booking.

Equipment and support requested

One Synthetic Projector Kit, the Synthetic PA System with two wireless microphones, and Synthetic AV Support (two technicians from 14:00 to 17:30). Stage power: one dedicated three-phase supply for the demonstration arena.

3. BUDGET

The total budget for the Synthetic Robotics Demo Day 2026 is Rs. 1,45,000.

Line item	Detail	Amount (Rs.)
Stage and AV hire	Staging, lighting and cabling beyond the requested support	48,000
Safety netting	Barriers and netting for the drone flight arena	22,000
Refreshments	Snacks and water for 200 attendees at Rs. 180 each	36,000
Prizes	Three team prizes and one audience-choice prize	20,000
Printing and signage	Posters, programmes and entrance signs	9,500
Contingency	Held back for unforeseen costs, about 6.5 percent	9,500
Total		1,45,000

4. FUNDING AND APPROVALS

Funding sources

Rs. 80,000 comes from the Synthetic Robotics Club's annual allocation. Rs. 65,000 comes from a sponsorship by Synthetic Tech Partners, a fictional company, which receives its logo on the programme and one banner at the entrance. No ticket revenue is planned; entry is free for students.

Approvals and reimbursements

No money is spent before Student Affairs confirms the venue in writing. Purchases above Rs. 10,000 need a faculty advisor signature, and every reimbursement claim is filed within seven days of the event with original receipts.

5. RUN OF SHOW

Time (IST)	Activity
14:45	Doors open; registration desk and demo-table setup finished
15:00	Welcome and introduction by the club president
15:15	Eight team demonstrations, seven minutes each, with two minutes between teams
16:20	Supervised drone flight demonstration inside the netted arena
16:40	Awards ceremony and audience-choice vote
17:00	Close; teardown, and the room handed back by 17:30

6. SAFETY PLAN

Drones fly only inside the netted arena, at most two at a time and below three metres, with a licensed faculty supervisor holding the emergency stop. Lithium batteries are stored in fireproof bags and are never charged in the auditorium. Two fire marshals and a first-aid desk staffed by two trained volunteers are present throughout. All emergency exits stay clear and marked, and attendance is capped at 300 even though the room holds 450.

7. VOLUNTEERS

Twenty-four student volunteers work in four teams of six: registration, stage and demo tables, safety and crowd flow, and hospitality. A briefing is held on 23 November at 18:00, and every volunteer carries a printed copy of the safety plan.

This document is a synthetic example prepared for a product demonstration. Names, companies, amounts and dates are invented.
